Standard Air Curtains

Standard solution
—flexible application

Standard solution

– *flexible application*

An air curtain creates an invisible barrier across a doorway. Different temperature zones are separated without limiting the access of people and vehicles. Air curtains reduce energy losses, create a comfortable indoor climate and prevent cold draughts.

An air curtain is also used to prevent the intrusion of insects, exhaust fumes and dust. It is usable in shops, gas stations, warehouses or any other exposed openings.

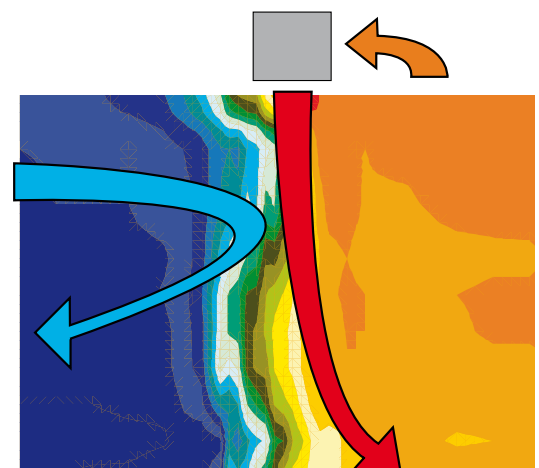

From service hatches to exclusive entrances

GELU-Frico offers a wide range of standard air curtains for flexible application in all kinds of entrances. With different lengths, different

capacities and different types of heating (electric heating, water heating or ambient) we have solutions for all openings, all in one standard range.

The perfect partner

Solid expertise, practical experience and know-how, collected through Europe-wide cooperation with universities and technical institutes have enabled GELU-Frico to become the perfect partner. Chosen by architects, construction companies and operators GELU-Frico provides solutions for the most complex entrance situations.

The invisible door

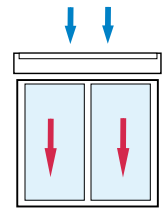

The easily installed and low-maintenance air curtain program.

Your opening

GELU-Frico can offer a wide range of products for exclusive entrances, service hatches, warehouses or any other opening needing an invisible door. With different lengths, capacities and heating systems we provide your opening with an efficient invisible door.

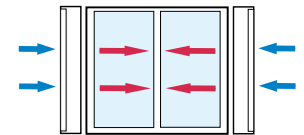

Your entrance

We consider not only the size of the opening and the physical conditions affecting it, but also the space around it. We have standard air curtains for horizontal, vertical or recessed mounting to make sure that it fits your entrance.

Your premises

It is not only the door that we create that is invisible, we also have almost invisible recessed products for environments with high demands on design. With its highly developed design all our air curtains blend in to the environment without compromising with the performance.

Complete product development and the utilisation of high-quality components enable the 5 year factory warranty - for all GELU-Frico air curtain systems.

The combination of suction grille and heat exchanger, developed by GELU-Frico in 1992 and which has been installed countless times since, makes the use of maintenance intensive air filters unnecessary.
